

## **Stylish, practical, high quality**

*New: stylish modern planter by GARANTIA*

**GARANTIA, well-known for high-quality and design-oriented rainwater containers, now offers the new GARANTIA Living product line, with stylish plastic containers for indoor and outdoor use. The new range includes 16 products. The premium products impress with their appealing design, high functionality and a balanced price-performance ratio.**

In two sizes, three surfaces and eight trendy colours, the Natura, Stone and Color models provide colour and design accents for the home and garden. The GARANTIA planters consist of two elements: a well-designed container and a plant tray. This can be simply inserted and removed with a handle. This allows you to economise your use of potting soil or expanded clay, and reduces the water requirement and the weight. For plants with a larger root system, the plant containers can also be planted without a planting tray.

Common to all plant containers is the conically downwards tapered construction. This allows the containers to look elegant, whatever their size. In addition, the large base area creates a high level of stability. The Natura, Stone and Color models are available in two sizes: with plant trays 150 cm in height and 62 cm in diameter, and plant trays 110 cm in height and 58 cm in diameter.

The containers look great together or on their own, inside or outside. The plastic containers are more impact-resistant and fracture-resistant, compared to plant containers made of mineral materials or glass-fibre-reinforced plastic. In addition, the low weight facilitates transport, positioning and rearranging.

## **Natura model: flowing lines**

Tiles, wallpaper, furniture decors - wave design is currently in fashion in interior and outdoor areas. Garantia, with several awards for the high-quality design of their products, offers the Natura model with a distinctive wave design. Each plant container is unique due to the manufacturing process: Concave and convex surfaces create a unique surface structure, with a visual appearance that changes as the light changes. The wave structure and the fine-grained surface create a particularly tactile experience. The flowing design harmonises with the low-key colours, Arctic, Sahara and Graphite.

## **Model Stone: clear direct form**

The Stone model has a characteristic smooth surface with a lava-coloured stone appearance. The clear direct form harmonises with the low-key colour scheme.

## **Color model: colourful accents**

On the other hand, the Color model in the on-trend colours Apple, Coco, Tomato and Cassis, will lend your space accents of colour. These planters impress with a silky shiny surface and a smooth surface finish.

GARANTIA planters are not painted, but made of dyed plastic. As a result, they are less sensitive to scratches and are also highly weather-resistant for exterior use. This guarantees long durability of their surfaces and colours. The containers are produced in an elaborate production process, and GARANTIA provides a five-year guarantee as a reflection of the quality.

GARANTIA is a trade mark of Otto Graf GmbH.
