Raised bed

Raised beds are increasingly popular among garden-lovers. They offer nutrient-rich soil, take up little space, and allow you to work in a comfortable position.

The new Ergo raised bed system from GARANTIA is ergonomic, modular and affordably priced.

Filling the raised bed with nutrient-rich material such as compost and garden soil creates the ideal place for growing plants. The higher soil temperature in a raised bed allows plants to grow faster.

This is due to both sunshine and the breakdown of individual soil layers. As well as all kinds of plants, fruit, vegetables and herbs grow extremely well in Ergo raised beds.

The height and length of the Ergo raised bed system can be adjusted according to use and type of planting. The panels are simply joined together with plug connectors.

Product advisor
Ergo raised bed system

shows you the many possible design options.

www.garantia.eu

How to fill your raised bed*

It's important to fill the Ergo raised bed correctly to create the ideal growing conditions for your plants and flowers. We recommend:

Flower soil

Add good-quality flower, plant or herb soil to just below the top edge.

Mature compost (approx. 20 cm (7.9"))

Compost or alternatively a mixture of compost and soil.

Garden soil (approx. 10 cm (3.9"))

Green waste (approx. 10 cm (3.9"))

E.g. leaves, garden waste, pieces of turf (place on top of tree and bush cuttings with grass side down – Alternative: coarse garden waste or grass cuttings, straw)

Tree & bush cuttings (approx. 20 cm (7.9"))

Roughly chopped twigs and branches, to allow enough circulation of air inside the bed to encourage rotting of the layered material.

Rodent Guard

Use a fine-mesh wire screen to guard against voles.

*Based on an Ergo raised bed with a height of 75 cm (29.5").

Ergo Raised bed system

Endless design options

The Ergo raised beds can be designed flexibly in height, so you can customise your raised bed to your individual needs

The best thing about it: an Ergo raised bed can be assembled very easily in a short time without tools.

The raised beds captivate with their deceptively realistic wood-look finish and with an infinite number of design and combination options, thus providing an optical highlight in your garden.

Plant aids

Accelerated growth for an early harvest

- The economical and flexible alternative to the traditional cold frame and poly tunnel
- High light permeability
- Gentle watering of young plants thanks to watering channels
- The safe way to protect plants from bad weather and the cold
- Protects plants from slugs and other pests

The cold frame alternative

The GARANTIA Sunny plant aids are designed to help create ideal growing conditions for plants and vegetables. A moist, warm microclimate inside promotes plant growth.

The GARANTIA Sunny plant aids are set up quickly and easily without any tools. By simply joining several tunnel modules together, you can adapt the Sunny tunnel to suit the size of your garden and your needs. The modules are fixed with ground anchors and sealed at the front and back with end caps. You will quickly produce a mini 'hothouse' for your plants. The Sunny cloche is even quicker and easier to start using. It is simply placed over the plant and secured with ground anchors.

GARANTIA Sunny plant aids are made from high-quality plastic and can therefore be used for years. Sunny planting aids are the economical alternative to the short-lived polytunnel. Their thick-walled design makes them extremely robust and UV-stable.

The transparent material lets in the sunlight the plants need in order to grow. An ingenious ventilation system creates the ideal growing climate for quick growth. The plant aids also protect against hail, wind and frost as well as vermin and pests.

The plants can be watered without the nuisance of having to open and close the GARANTIA Sunny plant aids. On the top are convenient watering channels with drip holes. These channels catch rain-water or water from a can and allow it to fall gently on the plants.

At the end of the growing season, the plant aids are simply dismantled and can be stacked for compact storage.

Without Sunny plant aid

Composters

Compost
BIOLOGICAL FERTILIZER ALREADY INCLUDED

GARANTIA®
Garden✿

By using your own compost as a garden fertiliser, you can save money and improve the long-term fertility of the soil. Garden cuttings and fruit and vegetable leftovers from the kitchen aren't waste, but valuable materials. By composting them, you can recycle them for use in your garden. Composting reduces waste by up to 30%, helping to protect the environment and the climate.

Modern composters are made of environmentally friendly recycled plastic and are UV and weather-resistant. GARANTIA composters range in size from 280 to 1,000 litres. Even if you don't have a garden, you can still compost your kitchen waste. The first Urban composter (page 43) can be kept on the balcony or in the kitchen, making it perfect for urban gardeners.

The right ingredients for good compost

For a good compost you need fruit and vegetable waste, coffee grounds, tea leaves, eggshells (crushed), pot plants, cut flowers, spent potting soil, lawn cuttings and leaves.

Wet materials should be mixed with dry ones and coarse materials with fine ones. Good aeration is important to producing good compost. Ensure that the compost is damp. Compost mustn't be too dry or too wet!

What *not* to put in the compost:

Meat, fish, leftover food, bread, sausage, cheese rind, bones, diseased plants, coal or charcoal ash, cigarettes, Hoover bags, litter, medicines and nutshells.

All GARANTIA composters are made from 100% recycled plastic and can be recycled in an environmentally friendly way.

Environmental protection

By composting waste, you are actively helping to protect the environment.

With GARANTIA, quality takes top priority. High-quality recycled plastics, state-of-the-art and sustainable production processes, innovative design and easy handling – these are the foundations of GARANTIA premium quality.

Thermolen®

Thermolen® is an innovative, quality material developed specifically for use in composters. Because it is foamed, Thermolen® makes highly insulating walls. The heat produced is retained more effectively inside the composter, which accelerates the composting process.

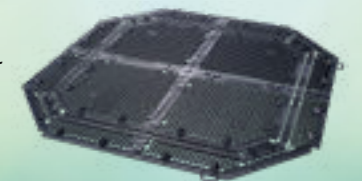

Thermolen® is sustainably manufactured from 100% recycled polypropylene (PP) and is fully recyclable.

Grating

The grating (accessory) gives microorganisms access to your composter while protecting it against rodents.

Thermo-Wood

The Thermo-Wood composter 600 l is unique on the market with its high-quality wood-look finish and is the alternative to conventional composters.

In addition to its appearance, it also convinces with its stability and easy filling thanks to two large wing covers. Removal is just as practical and simple as filling – two large removal flaps make work easier.

The ventilation openings on all four sides of the composter are concealed beneath the wooden boards to keep side panels decorative.

The Thermo-Wood composter is also available as a complete flat-packed set with grating. The practical grating protects against rodents and moles.

Warranty clause

The warranty mentioned in this brochure only applies to the products in question and not to accessories, even if these are included in the price. Within the warranty period, we replace material free of charge; additional services are excluded. The product must be handled and assembled according to the assembly instructions supplied in order for the warranty to apply. Assembly instructions can be downloaded from the Download area at www.garantia.de or requested in advance by phone.

Please note:

For all dimensions and volumes provided in this brochure, we reserve a tolerance of +/- 3%.

Subject to technical and price changes and errors. Design details, methods and standards of individual products may change as a result of technical advancements and environmental regulations.

Our general terms of sale and delivery (dated 01/10/2012) are exclusively applicable to all quotations and contracts. We will be happy to send you these terms upon request.
